

Rain Guage & Measurements

What does it teach? Rain and pH Measurement

Description: A standard 8" rain guage filled with water is displayed. Kids can measure how much water is in the rain guage. A tipping bucket with a counter connected to it is also displayed. Water is poured into the tipping bucket and the tipping mechanism can be seen. As the bucket tips, the counter advances.

Litmus paper is available with the color scale. Water can be tested to show its pH number from the chart.
